

IVS Tropospheric Parameters - Long Time Series

(H. Schuh and J. Boehm)

- ACs which have confirmed to take part so far: BKG, IAA, CNR, GSF, IGG.
- VLBI sessions: All IVS VLBI sessions since 1979 (except the Intensives) should be processed but subsets of 24 hour sessions are also acceptable if complete series are maintained.
- Format: Please, use the same format as for the regular submissions of tropospheric parameters of the IVS-R1 and IVS-R4 sessions.
- Procedure: There are no changes of the regular IVS-Product TROPO with the IVS-R1 and IVS-R4 sessions (submissions are due four weeks after the correlation). All other sessions are due eight weeks after the correlation (similar to the IVS Pilot Project - Time Series of Baseline Lengths).
- Deadline: The long time series are planned to be updated quarterly. The first deadline for the submission of the long time series since 1979 is **May 31, 2004**. I.e., all sessions including the first quarter of 2004 should be submitted at that time.

6h wet zenith path delays at Wettzell
