

U.S. Naval Observatory VLBI Analysis Center

Alan Fey, Nicole Geiger, Christopher Dieck, Megan Johnson

Abstract This report summarizes the activities of the VLBI Analysis Center at the United States Naval Observatory for calendar years 2015–2016. Over the course of two years, Analysis Center personnel continued analysis and timely submission of IVS-R4 databases for distribution to the IVS. During the calendar years 2015–2016, the USNO VLBI Analysis Center used the VLBI global solutions designated usn2015a, usn2015b, and usn2016a. Earth orientation parameters (EOP) based on the solutions and updated by the latest diurnal (IVS-R1 and IVS-R4) experiments, were routinely submitted to the IVS. Sinex format files based upon the bi-weekly 24-hour experiments were also submitted to the IVS. During the 2015–2016 calendar years, Analysis Center personnel continued a program to use the Very Long Baseline Array (VLBA) operated by the NRAO for the purpose of measuring UT1–UTC. Routine daily one-hour duration Intensive observations continued using the VLBA antennas at Pie Town, NM and Mauna Kea, HI.

1 Introduction

The USNO VLBI Analysis Center is supported and operated by the United States Naval Observatory (USNO) in Washington, DC. The primary services provided by the Analysis Center are the analysis of diurnal experiments, the production of periodic VLBI global solu-

tions for estimation of the Terrestrial Reference Frame (TRF), the Celestial Reference Frame (CRF), and Earth Orientation Parameters (EOP). The Analysis Center continued the submission to the IVS of Intensive (EOP-I) and session-based (EOP-S) Earth orientation parameters based on USNO VLBI global solutions. Analysis Center personnel maintain the necessary software required to continue these services to the IVS including periodic updates of the GSFC CALC/SOLVE software package. In addition to operational VLBI analysis, Analysis Center personnel are actively engaged in research related to future reference frames, the electronic transfer of VLBI data, and software correlation.

2 Current Analysis Center Activities

2.1 IVS Experiment Analysis and Database Submission

During the 2015–2016 calendar years, personnel at the USNO VLBI Analysis Center continued to be responsible for the timely analysis of the IVS-R4 experiments, with the resulting databases submitted within 24 hours of correlation for dissemination by the IVS. Analysis Center personnel continue to be responsible for the analysis and database submission for the periodic IVS-CRF experiments. Analysis Center personnel also continued analyzing IVS Intensive experiments for use in the USN-EOPI time series and continued a new series of Intensive sessions using the VLBA antennas at Pie Town, NM and Mauna Kea, HI.

2.2 Global VLBI Solutions, EOP, and Sinex Submission

USNO VLBI Analysis Center personnel used the periodic global TRF/CRF/EOP solutions usn2015a, usn2015b, and usn2016a over the course of the 2015–2016 calendar years. Analysis Center personnel continued to submit the USN-EOPS series, which is based upon the current global solution and updated with new IVS-R1/R4 experiments. The updated EOPS series is submitted to the IVS twice weekly within 24 hours of experiment correlation and is included in the IERS Bulletin A. Analysis Center personnel also continued routine submission of Sinex format files based upon the 24-hour VLBI sessions. In addition to EOPS and Sinex series, USNO VLBI Analysis Center personnel continued to produce and submit an EOPI series based upon the IVS Intensive experiments.

The staff of the VLBI Analysis Center is drawn from individuals in the Astrometry Department at the U.S. Naval Observatory. The staff and their responsibilities are as follows:

Name	Responsibilities
Alan Fey	Periodic global CRF/TRF/EOP solutions and comparisons; CRF densification research; VLBI data analysis.
Nicole Geiger	VLBI data analysis; EOP, database, and Sinex submission.
Christopher Dieck	VLBI data analysis; EOP, database, and Sinex submission.
Megan Johnson	VLBI data analysis; EOP, database, and Sinex submission.

2.3 vSolve for Interactive VLBI Analysis

The USNO VLBI Analysis Center fully transitioned to the use of vSolve for interactive VLBI analysis.

2.4 VLBA Intensive Experiments

During the 2014 calendar year, Analysis Center personnel continued a program to use the Very Long Baseline Array (VLBA) operated by the NRAO for the purpose of measuring UT1–UTC. Routine daily one-hour duration Intensive observations continued using the VLBA antennas at Pie Town, NM and Mauna Kea, HI. High-speed network connections to these two antennas are now routinely used for electronic transfer of VLBI data over the Internet to a USNO point of presence. Once fully operational, it is anticipated that these VLBA Intensive sessions will be scheduled as IVS-INT4 sessions and that the data will be released to the IVS for community-wide distribution.

4 Future Activities

The following activities for 2017 are planned:

- Continuing the analysis and the submission of IVS-R4 experiments for dissemination by the IVS.
- Continuing the production of periodic global TRF/CRF/EOP solutions and the submission of EOP-S estimates updated by the IVS-R1/R4 experiments to the IVS.
- Continuing the submission of Sinex format files based on the 24-hour experiments.
- Continuing the analysis of IVS Intensive experiments and submission of EOP-I estimates to the IVS.
- Continuing the scheduling, analysis, and database submission for IVS-CRF and IVS-CRDS experiments.
- Continuing the post-processing and the analysis of VLBI Intensive data from the MK and PT VLBA stations.
